

Ethan Vo

ekvo@uci.edu | [/in/ethnvo](https://in.ethnvo) | ethanvo.dev | github.com/ethnvo

EDUCATION

University of California, Irvine

Expected Graduation: 2027

B.S in Software Engineering

Relevant Coursework: Data Structures/Algorithms, Operating Systems, Compilers, Comp Architecture, Comp Networks, Machine Learning, Artificial Intelligence, Cloud Computing, Software Development, ProgLang

SKILLS

Languages: Python, C/C++, C#, JavaScript, Typescript, Java, SQL, HTML/CSS, R, RISC-V

Frameworks & Platforms: AWS, Supabase, Firebase, FastAPI, Flask, Django, ASP.NET Core, Node.js, React, REST APIs

DevOps & Tools: Docker, Jenkins, Git, Jira, Linux, PostgreSQL, PyTorch, InfluxDB, JUnit, MongoDB, Pandas, Claude Code

Interests: Mobile App Development (Social Media), Vibe Coding, Weightlifting, Soccer, Basketball, Tennis, Personal Finance

WORK EXPERIENCE

koderAI

June 2025 - Sept 2025

Software Engineering Intern

Irvine, CA

- **Developed** a high-scale **logging API** using **C#/.NET** and **Azure Cosmos DB**, architecting a structured schema to store and audit thousands of LLM interactions for model performance tracking.
- Streamlined **mobile deployment** by integrating a **Docker-based Android build pipeline** with **Azure Queue Storage**, enabling asynchronous task handling and reducing manual build overhead for the engineering team.
- **Architected cloud-native serverless workflows** via **Azure Functions**, leveraging queue-trigger mechanisms to orchestrate multi-agent AI operations with **100% execution reliability**.
- **Integrated Microsoft Semantic Kernel** to create a modular GenAI abstraction layer, enabling seamless switching and workflow chaining across **20+ foundational models** in the **Azure AI Foundry**.

JTutoring

Oct 2025 - Present

Coding/ STEM Instructor

Garden Grove, CA

- **Instructing 15+ students** in AP CS/CSP and advanced math (Algebra II, Trig, Pre-Calc, Calc AB), through mentorship in **Java/Python fundamentals** and **Linux-based** cybersecurity labs.

HACKATHONS/ACTIVITIES

[author](#) | **AWSpeak** | **Top 5 Finalist, AWS CloudHacks 2025** | *Next.js, React, TypeScript, Django, Python, LocalStorage*

- **Architected** a multi-source **verification engine** using **Semantic Scholar** and **OpenAlex APIs**, achieving high-confidence author identification by implementing fallback logic to resolve incomplete metadata.
- **Reduced search latency** by **90%** by implementing a **Django caching layer**, allowing the platform to handle **20+** concurrent academic queries without hitting external API rate limits.
- **Engineered** a responsive full-stack MVP in **48 hours** with **Next.js** and **Tailwind CSS**, featuring dark/light modes, LocalStorage persistence for search history, and skeleton loading states for optimized perceived performance.

[AWSpeak](#) | **Top 5 Finalist, AWS CloudHacks 2025** | *AWS (Bedrock, Polly, Transcribe, S3), Flask, Next.js, TypeScript, Tailwind CSS*

- **Architected a realistic mock interview engine** orchestrating **AWS Bedrock, Polly, and Transcribe** to deliver low-latency, voice-driven behavioral interviews tailored to job descriptions.
- **Eliminated 100% of report generation wait time** by engineering an **asynchronous Flask pipeline** that evaluates responses against **Amazon's 16 Core Values** during the session.
- **Developed a synchronized audio processing layer** in **Next.js** for real-time voice capture and **S3 uploads**, ensuring seamless transitions and robust session persistence.

Rally – **Social Networking & Event Management App** | *React Native, Expo, TypeScript, Firebase (Firestore, Auth, Storage)*,

- Leading a **9-person** engineering team to architect and deploy a cross-platform social activity app using **React Native** and **Expo**, facilitating real-time discovery, hosting, and management of local events.
- **Engineering a high-concurrency data architecture** utilizing **Firestore onSnapshot** listeners and **Zustand**, reducing global state overhead by **35%** and ensuring sub-**100ms** UI updates for real-time participant tracking.
- **Optimized mobile performance** by implementing a custom **denormalization strategy** for security rules and user permissions, cutting document read costs by **50%** and eliminating expensive cross-collection joins.
