

Ethan Vo

ekvo@uci.edu | [/in/ethnvo](#) | [ethanvo.dev](#) | [github.com/ethnvo](#)

EDUCATION

University of California, Irvine

Expected Graduation: 2028

B.S. in Software Engineering

Relevant Coursework: Data Structures/Algorithms, Operating Systems, Compilers, Comp Architecture, Networks, Machine Learning, Artificial Intelligence, Cloud Computing, Software Development, ProgLang, Software Testing, Distributed Systems

SKILLS

SLanguages: Python, C/C++, C#, JavaScript, Typescript, Java, Go, SQL, HTML/CSS, R, RISC-V, Prolog, LISP, DART

Frameworks & Platforms: AWS, Supabase, Firebase, FastAPI, Flask, Django, ASP.NET Core, Node.js, React, REST APIs, GCP, Azure

DevOps & Tools: Docker, Jenkins, Git, Jira, Linux, PostgreSQL, PyTorch, InfluxDB, JUnit, MongoDB, Pandas, Claude Code, Codex

Interests: Mobile Apps (Social Media), Vibe Coding, Weightlifting, Soccer, Basketball, Tennis, Boulderling, Investing

WORK EXPERIENCE

Amazon

Sept 2026 - Dec 2026

Software Development Engineer Intern

Culver City, CA

- Platform services for **Amazon Music (Podcasts)**

Equus Compute Solutions

June 2026 - Sept 2026

Software Engineering Intern

Industry, CA

- Constructed** a concurrent **Go pipeline** normalizing hardware-inventory logs into **JSON Lines** across 3 log formats, using a **worker-pool/single-writer** design with crash-safe progression, processing **5000+** machines at production scale.
- Implemented 6 hardware performance** benchmark tasks along with **Prometheus**-driven thermal monitoring, integrated into a **RabbitMQ**-based **extractor/analyzer pipeline** for automated pass/fail validation.

koderAI

June 2025 - Sept 2025

Software Engineering Intern

Irvine, CA

- Developed** a high-scale **logging API** using **C#/.NET** and **Azure Cosmos DB**, architecting a structured schema to store and audit thousands of LLM interactions for model performance tracking.
- Streamlined mobile deployment** by integrating a **Docker**-based **Android build pipeline** with **Azure Queue Storage**, enabling asynchronous task handling and reducing manual build overhead for the engineering team.

onda - hang better

March 2026 - Current

Founder

- Leading a **9-person** engineering team to architect and deploy a cross-platform social event logistics app using **React Native** and **Expo**, facilitating real-time map-based discovery, coordination, and management of hosted events.

HACKATHONS/ACTIVITIES

[author](#) | **1st Place (Best Female Empowerment), VenusHacks 2025** | *Next.js, React, TypeScript, Django, Python, LocalStorage*

- Designed** a multi-source verified **academic search engine** using **Semantic Scholar** and **OpenAlex APIs**, achieving high-confidence female author identification by implementing fallback logic to resolve incomplete metadata.
- Reduced search latency** by **90%** by implementing a **Django caching layer**, allowing the platform to handle **20+** concurrent queries without hitting external API rate limits.
- Engineered** a responsive full-stack MVP in **48 hours** with **Next.js** and **Tailwind CSS**, featuring dark/light modes, **LocalStorage persistence** for search history, and skeleton loading states for optimized perceived performance.

[AWSpeak](#) | **Finalist (Top 5 Overall), AWS CloudHacks 2025** | *Next.js, AWS (Bedrock, Polly, Transcribe, S3), Flask, TypeScript*

- Architected** a realistic **mock interview engine** orchestrating **AWS Bedrock, Polly, and Transcribe** to deliver low-latency, voice-driven behavioral interviews tailored to job descriptions.
- Eliminated 100%** of report generation **wait time** by engineering an **asynchronous Flask pipeline** that evaluates responses against Amazon's 16 Core Values during the session.
- Delivered** a synchronized **audio processing** layer in **Next.js** for real-time voice capture and **S3** uploads, ensuring seamless transitions and robust session persistence.
